PROFILE

Payments and product operations professional with 5+ years in European fintech, running and optimising B2C subscription and payment products across Europe, the UK, the US, Canada and LATAM. I investigate payment performance down to PSP, MID and BIN level, coordinate fixes with Engineering and payment partners, and build AI agents and automations that take manual work out of operations. Former mathematics and statistics teacher; BSc in Mathematics; advanced Excel, strong Tableau, working SQL.

SELECTED RESULTS

≈ +7%
authorization rate in one market after tracing the drop to an incorrect Mastercard prepaid parameter

4 days
instead of 2 weeks for partner declarations, after rebuilding the workflow with AI agents

2 wallets
Apple Pay & Google Pay launched in France, from business case to production

9 platforms
PSPs, gateways, orchestration and chargeback tools, incl. Stripe, Worldline, IXOPAY

EXPERIENCE

CLIQ Digital · Amsterdam

Aug 2020 – Feb 2026

Digital subscription products. Four roles, from country operations into the Self-Managed Card Payments organisation and payment operations.

Payment Operations Manager & Billing Specialist

Mar 2024 – Feb 2026

Took ownership of payments and billing after a restructure closed the Self-Managed Card Payments organisation.

- Owned day-to-day payment and billing operations for subscription products across European markets: initial and recurring payments, failed payments, retries, dunning, refunds and cancellations.
- Monitored authorization and declines by country, entity, MID, PSP, payment method and card type; traced one market's underperformance to an incorrect Mastercard prepaid parameter and coordinated the fix with Technology and the partner, contributing to a **≈7% authorization improvement**.
- Set retry and dunning actions per payment-error type with CRM, gateways, PSPs and Technology, and supported the move from Sticky.io Smart Dunning to internally managed retry logic.
- Managed payment and technology partners (Stripe, Worldline, IXOPAY, GEP, Inovio, Sticky.io, Celeris) on integrations, routing, configuration, SLAs and escalations, often working with account managers daily.
- Rebuilt the manual partner-declaration workflow with small AI agents (Claude, Zapier, Python) that handle routine steps such as preparing declaration letters, cutting each cycle from **about two weeks to four days**.
- Advised merchants directly on payment performance through calls and regular reporting.
- Replaced email and Teams status-chasing with a centralised Monday.com setup workflow and automated stakeholder notifications.
- Supported Finance on reconciliation and revenue-reporting issues; investigated payment and fraud incidents with direct financial impact.

Senior Product Operations Manager

Jan 2022 – Mar 2024

- Owned multiple B2C subscription and payment product domains across Europe, the UK, the US, Canada and LATAM, with expansion initiatives targeting Japan, Asia and Australia.
- Owned requirements, backlog and prioritisation in two-week agile sprints with Engineering, through UAT, launch readiness and post-launch optimisation for new products and country launches.
- Tracked conversion, authorization, declines, churn, fraud and chargebacks across ~5 entities with ~5 MIDs each, drilling down to PSP/acquirer, BIN and card type; re-routed traffic when a PSP underperformed.
- Ran fraud and risk controls (BIN blocking, fraud rules, MID caps, IXOPAY risk scoring). Took part in decisions to shut down payment traffic when risk became materially high, then coordinated Finance, BI, Technology and partners through a controlled restoration.
- Integrated and operated Ethoca and Visa RDR for chargeback and dispute prevention; set country-specific 3DS parameters to balance conversion and risk.

- Ran continuous A/B tests on checkout design, pricing, offers, payment methods and landing pages; evaluated results with SQL, BI and Tableau and decided with Product, Marketing and management what to roll out.
- Prepared forecasts and business plans for acquirers to secure approval for new traffic and products.
- Led a team of three Product Operations specialists as the senior Amsterdam-based lead (manager based in Canada): allocated work, onboarded and trained new joiners, joined hiring interviews.
- Prepared the team's input to the weekly management report sent to the CEO, covering performance, launches, incidents, root causes and risks.

Product Operations Manager

Jan 2021 – Jan 2022

- Joined the newly created Self-Managed Card Payments organisation and helped build its card-payment capability from the ground up: Visa, Mastercard and Amex, later Apple Pay and Google Pay.
- Turned country requirements (payment methods, licensing, Legal and Compliance) into product and technical requirements, and built end-to-end journeys from marketing entry to checkout, payment and confirmation.
- Worked with Engineering, QA and payment partners on integrations, APIs, testing and go-live for launches across European and international markets; optimised post-launch traffic and conversion with Marketing.

Country Operations Intern

Aug 2020 – Jan 2021

- Supported country-level operations, commercial activities, and mobile marketing and advertising processes.

Mathematics Tutor · Freelance, Patras

2014 – 2019

- Taught mathematics, statistics and algebra to students at different levels, learning to explain complex topics simply.

SKILLS

Payments & billing

Payment orchestration and routing · PSP/acquirer performance · authorization and decline analysis · 3DS/3DS2 · recurring billing, retries and dunning · fraud rules, BIN blocking and risk scoring · chargebacks and disputes · reconciliation

Product & delivery

Requirements and backlog · agile sprints · UAT and launch readiness · country and product launches · CRO and A/B testing · team leadership · merchant consulting · forecasting and business plans · stakeholder and partner management

Data & analysis

Excel (advanced) · Tableau (strong) · SQL (working level) · Power BI (intermediate) · Looker (1 year) · Python · KPI monitoring · funnel and conversion analysis · root-cause analysis · executive reporting

Platforms, AI & tools

IXOPAY · Stripe · Worldline · Sticky.io · GEP · Inovio · Celeris · Ethoca · Visa RDR · AI agents (Claude) · Python · Zapier · n8n · Make · Jira · Confluence · Monday.com

EDUCATION

BSc Mathematics

University of Patras, Greece. Pure and applied mathematics, statistics.

Pre-Master's, Educational Science & Technology

University of Twente, Enschede. Pre-Master's coursework completed.
