

DIMITRIOS TSOUNTOS

PRODUCT & PAYMENT OPERATIONS MANAGER | PAYMENTS | FINTECH

Profile

Product and payment operations professional with 5+ years at CLIQ Digital, an international subscription business. Joined as an intern, then helped build the company's card payment department from two people to a team that launched payments in global markets. Work spans checkout flows, PSP and acquirer partners, MID applications, billing, fraud and chargeback control, and A/B testing, with 2-week agile sprints alongside Engineering. Helped lift authorization ~7% in one market and cut a 2-week manual process to 4 days with AI automation. BSc in Mathematics.

Professional Experience

Payment Operations Manager & Billing Specialist, CLIQ DIGITAL, Amsterdam

MAR 2024 – FEB 2026

- Owned the payments side of the Apple Pay and Google Pay launch in France (summer 2025), working with Tech on the setup and optimization.
- Set up billing and price IDs for affiliate products with GEP (Global Elite Payments, US) and other external partners.
- Investigated declines and authorization drops with PSPs and coordinated rerouting of traffic to other PSPs.
- Traced an incorrect Mastercard prepaid parameter as root cause, helping lift authorization ~7% in one market.
- Moved retry and dunning logic from Sticky.io Smart Dunning to an internal setup, from requirements to go-live with Technology and PSPs.
- Optimized with my manager and Tech an internal tool for BIN blocking, fraud detection and risk management.
- Rebuilt a manual partner-declaration workflow with small AI agents (Claude, Zapier, some Python), cutting it from 2 weeks to max 4 days.
- Tracked approval rates across global markets (~10,000 successful conversions per day) with SQL, Excel and Tableau.
- Built a forecast with the BI team and sent it to our acquirers to get approval for new MIDs.

Senior Product Operations Manager, CLIQ DIGITAL, Amsterdam

JAN 2022 – MAR 2024

- Worked with external acquirers on MID approvals: prepared application material, set a cap for each MID, and handled KYC where needed. Started with 3 legal entities and 5 MIDs per entity, then opened new entities (UK, Europe) to launch more products.
- Owned both payment flows, marketing (banner to checkout) and organic (buy inside the platform), across more countries, fixing anything that broke or underperformed with Engineering.
- Integrated IXOPAY into our stack: requirements, sandbox testing, A/B tests, QA and designers, coordinated with Engineering and Tech.
- Interviewed and hired two external specialists and one internal transfer with my manager, trained all three in the payment ecosystem, and led them day to day.
- Worked in 2-week agile sprints with Engineering, writing requirements and acceptance criteria for payment features and APIs.
- Ran continuous A/B tests on checkout design and pricing across funnel steps and markets, with hypotheses built with my manager and results read in SQL and Tableau.
- Monitored conversion, fraud and chargeback ratios per country with BI, Visa RDR and Chargebacks911.
- Prepared the weekly management report on launches, risks and actions, read at CEO level.
- Advised merchants on payment performance through regular calls and reporting.

Product Operations Manager, CLIQ DIGITAL, Amsterdam

MAR 2021 – JAN 2022

- One of the first two people, with my manager, in the new self-managed card payments department, built from scratch with Engineering, QA and partners.
- Connected a multi-content subscription platform to card payments and built the checkout page and flow with designers and marketing (Visa, Mastercard, Maestro, Amex), from card details to a successful subscription.
- Worked with Tech and designers on the websites for the launch (more than 5 sites and domains).
- Tracked conversion, fraud ratio and chargeback ratio for each launched country (global markets incl. US, LATAM, Canada, Australia, Japan, Europe), with Worldline, Sticky.io and Inovio.
- Translated market requirements into technical requirements and customer journeys.

Country Operations & Marketing Intern, CLIQ DIGITAL, Amsterdam

AUG 2020 – FEB 2021

- Worked on mobile advertising and SMS-with-code products, analysed sales and supported the team on daily tasks.
